

# **ASSIGNMENT 6:**

## **API: Weather API app (Module 12)**

**Problem Statement:** This project focuses on building a weather application utilizing the OpenWeatherMap API. The application will present weather data in a visually appealing CSS card format, showcasing detailed information such as current temperature, humidity levels, wind speed, and weather icons. Users will be able to update the weather information by clicking a refresh button, ensuring the display remains accurate and up-to-date.

**Submission:** You need to upload the **compressed zip file of your working project folder** to drive and then submit the accessible link (**make sure to enable sharing access**).

**Reference:** For reference, as mentioned above please follow **MERN Stack course >Module 12**
