

ASSIGNMENT 3:

JQuery: Form Validation (Module 6: Lecture 8)

Problem Statement: This JavaScript and jQuery project aims to create a robust Form Validation application. Users will enter details into a form, and upon clicking the submission button, the application will validate all input fields. Any errors will be listed clearly, ensuring a fresh error list with each submission. If all fields are correctly validated, a success message will be displayed. This project ensures accurate data entry and enhances user experience by providing immediate and clear feedback.

Submission: You need to upload the **compressed zip file of your working project folder** to drive and then submit the accessible link (**make sure to enable sharing access**).

Reference: For reference, as mentioned above please follow **MERN Stack course >Module 6 >Lec. 8**
